The Innovation in Library and Information services with HTML and Other Technologies

By Rachael Mallett

When working in the library field, it is very helpful to understand HTML, CSS, JavaScript, Github and other technologies. Knowing how to properly use these can equip you, as a staff member, to better assist patrons, your fellow library staff and your library as a whole. Empowered with this knowledge you are able to assist patrons in answering basic programing questions and students on assignments. If the library that you work at doesn't have a website, you have the means to assist in making one.

Understanding HTML, CSS, JavaScript, Github and other technologies, provides you with the ability to comprehend our ever change societies technology. It gives you the knowledge of the basics of programing to be able to keep up with and continue to learn in this field. It allows you to understand how our society is integrating this new technology and these new systems into our libraries as well. These tools are great to have in your arsenal when entering the library field.
